Alternative 2: Rehabilitation

Features:

- Major rehabilitation of the existing bridge will result in a remaining life expectancy of 30-40 years.
- Fishing pier and wider sidewalks provide additional capacity and improved access for non-motorized bridge users.
- Aesthetic architectural improvements to provide an improved “Gateway” into Ocean City.
- No significant right-of-way or environmental impacts.

Issues:

- Substandard narrow curb to curb roadway width.
- All bridge traffic still impacted by frequent drawbridge openings.
- Total cost = \$130-\$140 Million.
- Total Displacements = 0.
- May require temporary lane and total bridge closures during construction.
